

Q How do I change the color of my front grill lighting?

Download the "Happy Lighting" app, then tap the menu icon in the top-left corner and select "My Devices" to connect to your golf cart. Once connected, you can choose any color you like.

Q How do I use the voice-activated lights on my Signature model?

Say "Hello JET," then use any of the voice commands listed under Resources on the JET EV website.

Q If I'm leaving for a long time, what should I do to my cart?

Charge your cart to 100%, then locate the battery power button and hold it for 3 seconds until the LED light turns off. When you return, turn the battery back on, charge the cart, and drive as normal.

Q Can I get my cart wet?

Yes. Golf carts are built for outdoor use, but heavy rain can occasionally reach places it shouldn't. JET EVs have built-in protections that shut a component down if it gets too wet, keeping it safe until it dries out and is ready to operate again.

Q Should I always leave my golf cart charging?

No. Lithium batteries don't suffer from the "memory effect" that older lead-acid batteries do, and constantly holding the battery at 100% adds unnecessary stress. For the best long-term battery life, let the charge run down from time to time — just never let the battery drain fully.

Q What does the switch under my seat do?

That switch disengages your electromagnetic e-brake. If you ever need to tow the cart, flip the switch to release the brake. If your cart has a Navitas controller, turn the cart on first, flip the switch, then turn the cart off and back on — the brake will then disengage.

Q What are the dials on my armrest for?

Those dials adjust the height of the armrest. Twist in either direction to raise or lower it to a comfortable position.
